

planetarydata.org

From Plone → WordPress

the issue

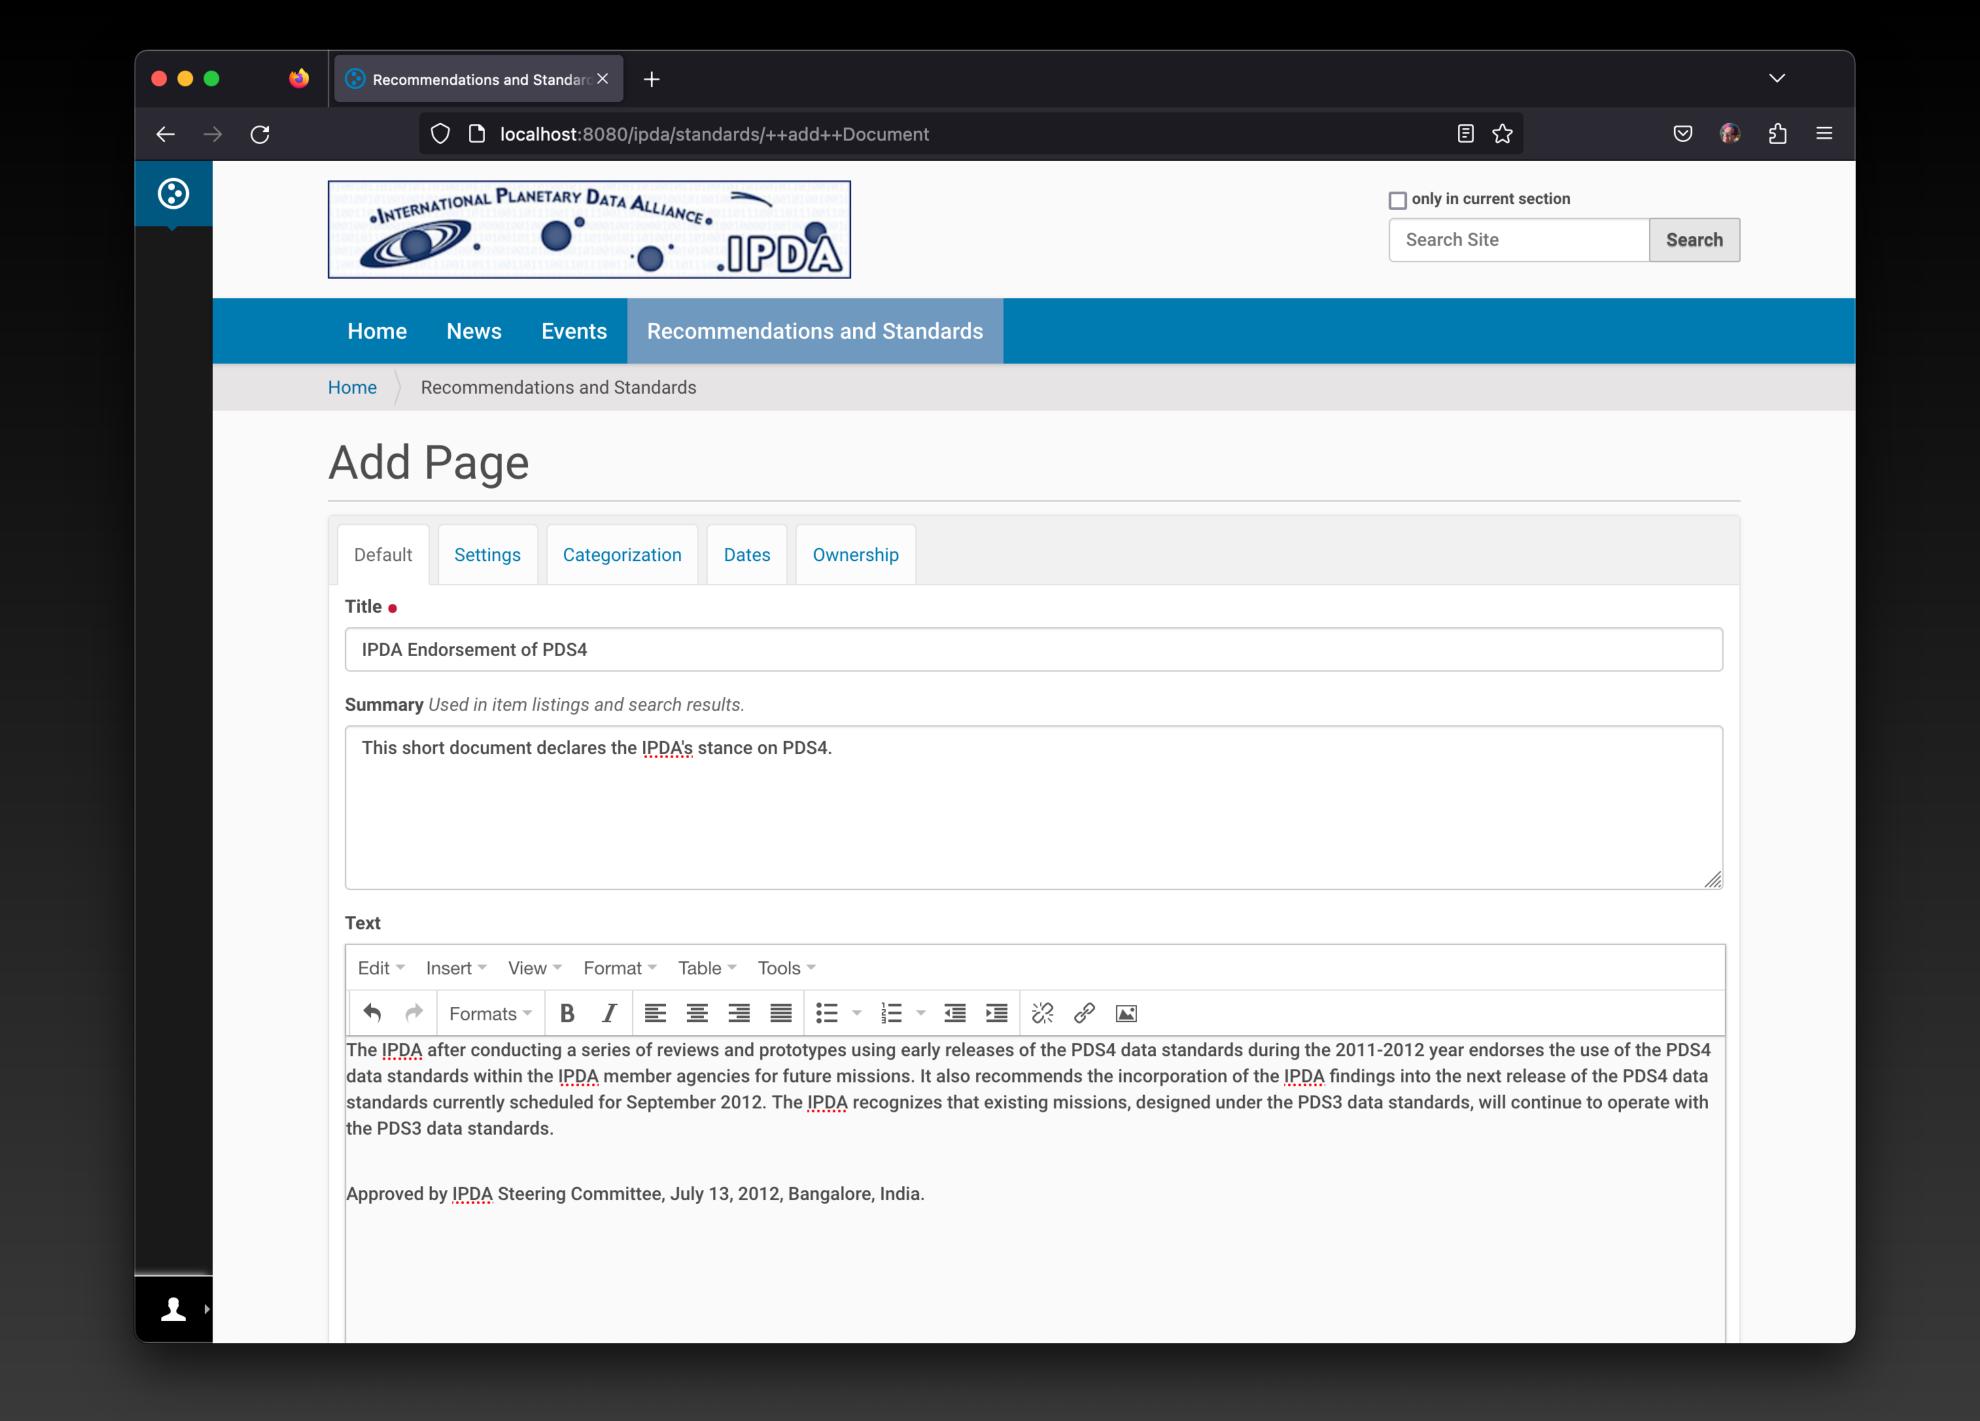

what's wrong with Plone?

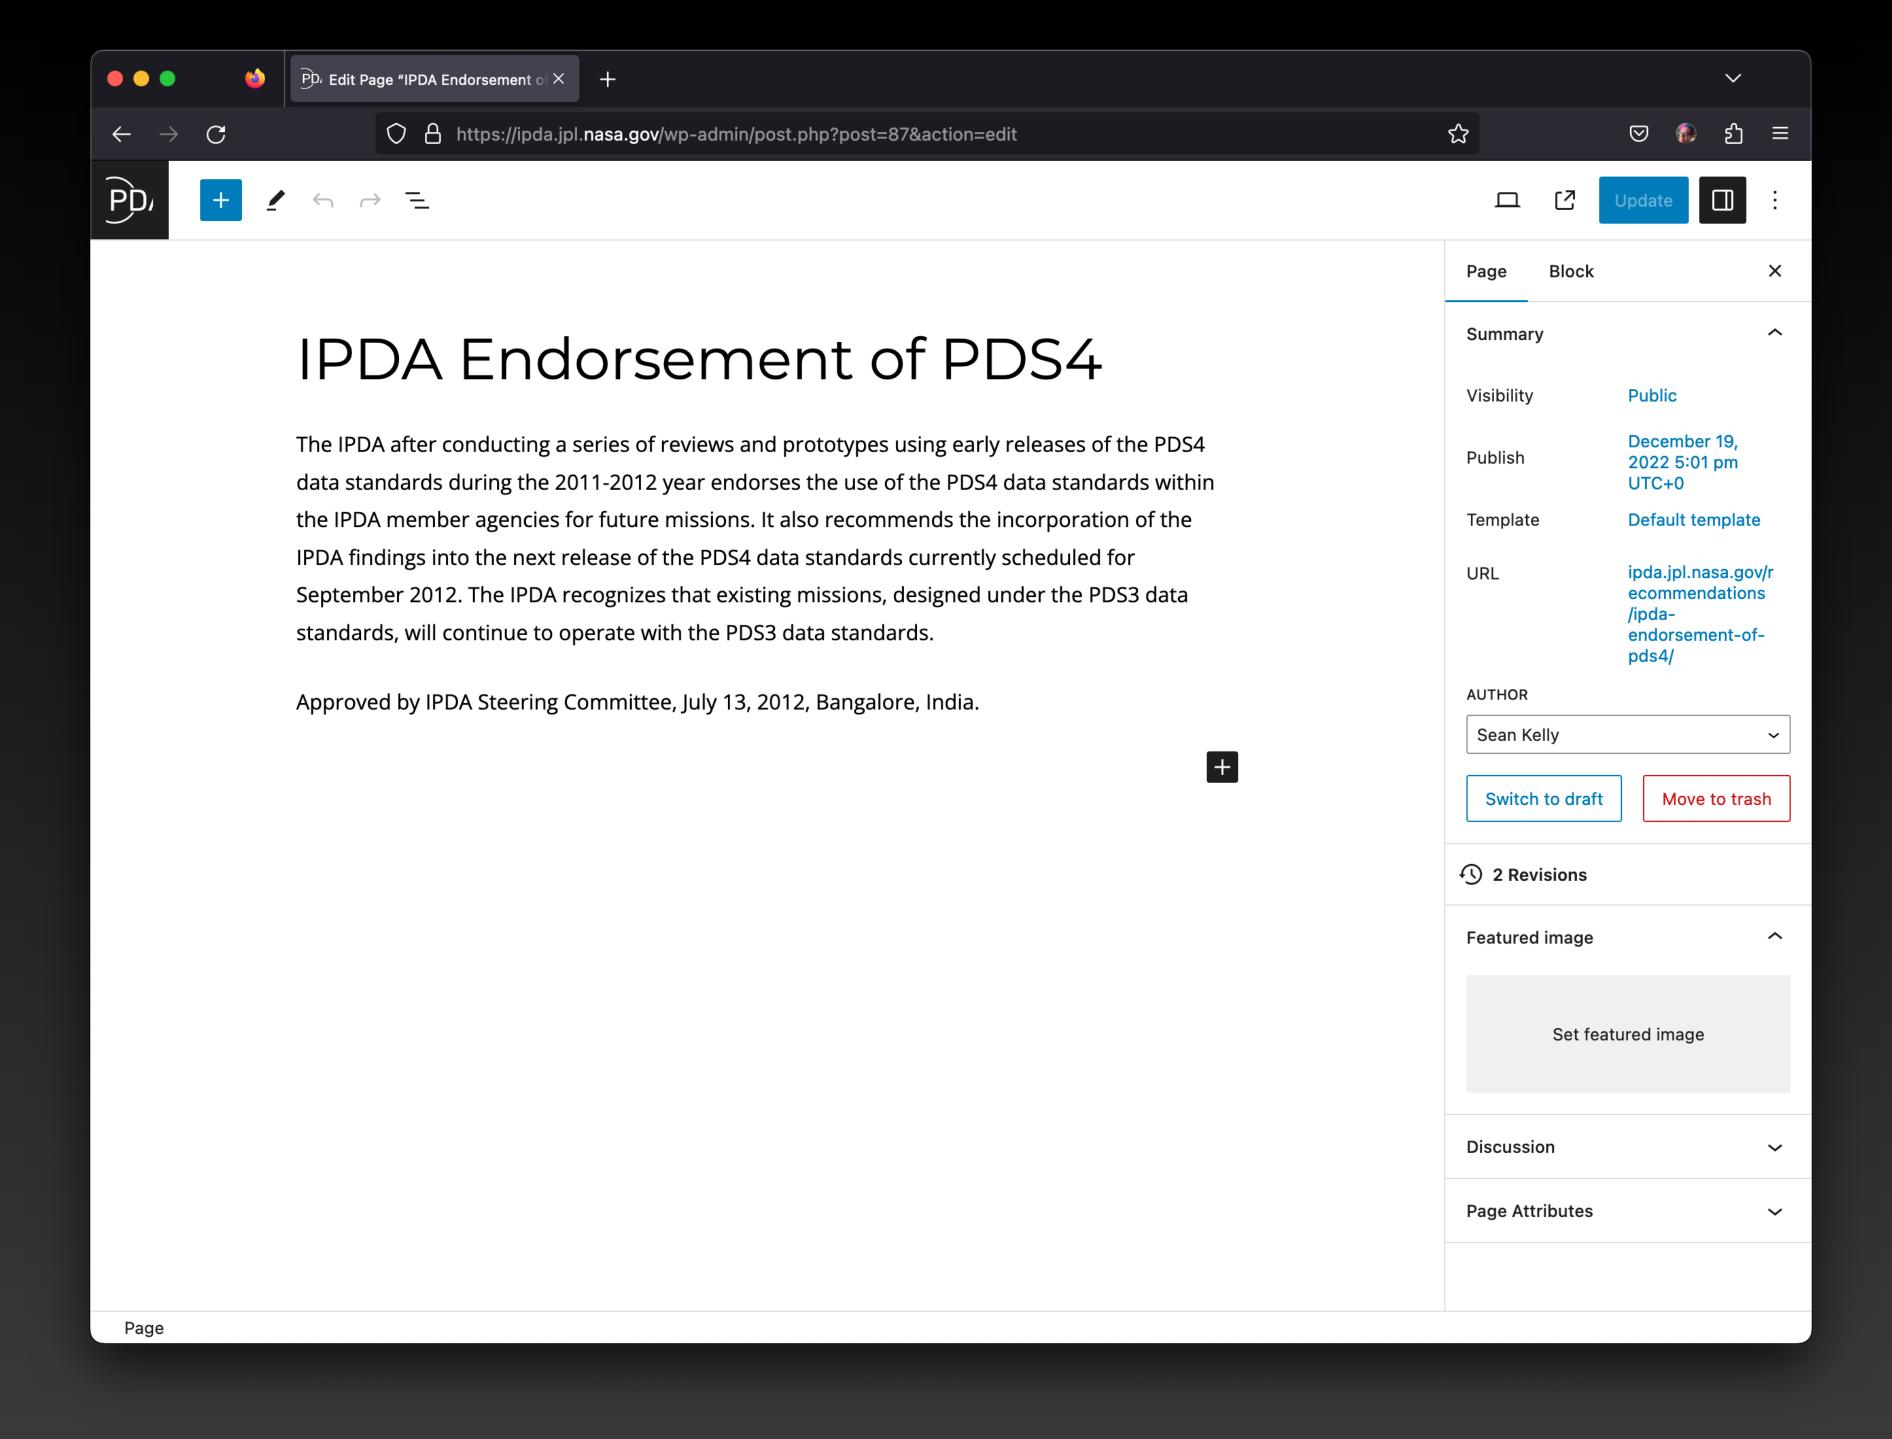

nothing really

all content management systems are more or less the same

```
$ ls
background.jpg index.html
$ vi index.html
```

driver?

familiarity

Top In CMS Usage Distribution in the Top 1 Million Sites		
Technology	Websites	%
WordPress	290,344	29.03
° CPanel	34,137	3.41
	27,004	2.7
Google Search Appliance	26,640	2.66
X Atlassian Cloud	26,475	2.65
My Salesforce	24,775	2.48
HubSpot CMS Hub	18,066	1.81
Plesk	16,313	1.63
💢 Joomla!	13,452	1.35
1C-Bitrix	12,450	1.24

unfortunate

PHP

What did it take

Going from one CMS to another

- Extract the current content
- Deploy the new site
- Load the extracted content
- Bureaucracy

Going from one CMS to another

- Extract the current content
- Deploy the new site
- Load the extracted content
- Bureaucracy

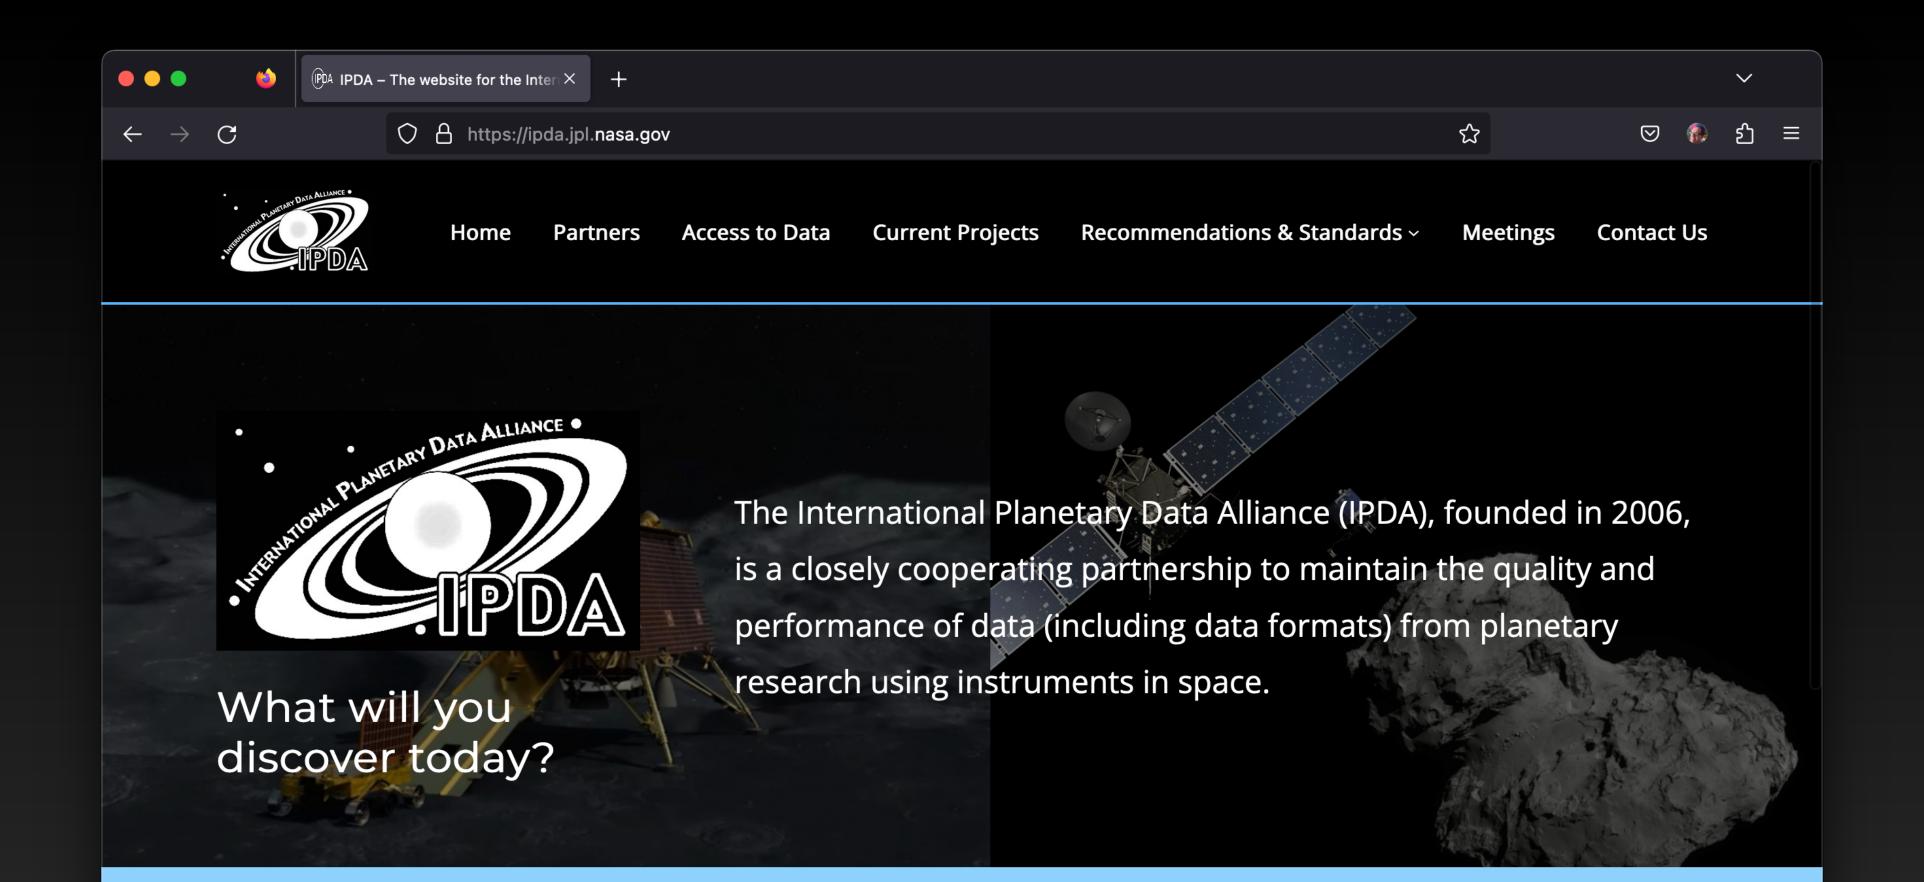

Deploying the new Site

- As simple as filing a DSIO ticket
 - Let the system administrators figure the rest of it out
- Once live
 - Populate it with the pages the IPDA steering committee wanted
 - by hand ⁶⁹

Bureaucracy

- URS review for the new site
 - Get a clearance number
 - Get a branding exception
- Two-factor authentication: absolute requirement
 - Because it is accessible on the public internet

Read Our Charter

Member organizations participate in both its Steering committee and on specific projects related to building standards and interoperable systems.

Specific tasks include promoting the international exchange of high-quality scientific data, organized by a set of standards to facilitate data management. Planetary Data System, recognized by the Committee on Space Research (COSPAR), is the de facto standard for archiving planetary data.
